FEATURE ADDITION: AUTO-GENERATED PAS REPORT

Location: Case Handler View > Pre-Protection Tab > Step: "Under Evaluation" / "Prior Art Search Done"

Workflow & Logic Instructions:

- **Data Entry & Saving:** While the step is still "Under Evaluation" (not yet complete), add a dedicated button or feature (e.g., "Fill PAS Report") allowing the handler to input the report data. Include a **Save** or **Save Draft** function so the handler can iteratively add or edit information over time without losing progress.
- **IPC Classification Formatting:** The system must support multiple International Patent Classifications (IPC) per report. Each classification entry must include its description and support nested subclassifications.
    - *Example:*
        - **A23K 30/00** - Processes specially adapted for the preservation of materials in order to produce animal feeding-stuffs
            - **30/15** - using chemicals or microorganisms for ensilaging
- **Admin Approval Workflow:**
    - Once the Case Handler finishes the report, it must be submitted for Admin approval before the handler can proceed to the next step.
    - **Notifications:** When a PAS report is pending approval, an alert (notification, message, or icon similar to response threads/remarks) must appear on the Admin's interface to notify them.
    - **Action Buttons:** Include dedicated buttons for the Admin to review and "Approve" the PAS report.
- **Visibility & Access:**
    - **Admins:** Can view the current progress of the drafted PAS report at any time while it is being worked on.
    - **Applicants:** Can only view and access the report (via a dedicated "View PAS Report" button) once it is fully finished and submitted for admin approval / officially completed.

Report Content & Sections: The generated report must include the following specific sections and tables:

- **General Information:**
    - University
    - Researchers
    - Title
    - Date of Research
    - Abstract
    - International Patent Classification (IPC) *(Formatted for multiple entries, descriptions, and subclassifications)*

    - Keyword(s)
- **Search Strings and Database (Table):**
    - *Column 1:* Database
    - *Column 2:* Search String
    - *Column 3:* Number of Hits
- **Documents Considered to be Relevant (Table):**
    - *Column 1:* Category
    - *Column 2:* Document Information (Patent number, Title, and Publication date)
    - *Column 3:* Abstract
    - *Column 4:* Publication Link
- **Comparison of Technical Features (Table):**
    - *Column 1:* Technical Features
    - *Column 2:* Present Invention
    - *Column 3+ (Dynamic):* D1, D2, D3, etc. (for comparing multiple documents)
- **Recommendation Section:**
    - Description
    - Novelty
    - Inventiveness
    - Industrial Applicability
- **Certification & Signatures:**
    - "Search conducted by:" (with signature line)
    - "Search reviewed by:" (with signature line for the IP Officer)

FEATURE ADDITION: ROLE SWITCHING & TEMPORARY ADMIN DELEGATION

Location: Admin Portal & Case Handler Portal

Workflow & Logic Instructions:

- **Admin Account Flexibility & Login:** The system must support two ways for an Admin to log in and operate:
    1. Using a dedicated, generic "Master Admin" account.
    2. Using a personal "Case Handler" account that has been officially designated as the Main Admin within the system settings.
- **Admin Case Handling & Mode Switching:** Admins must have the ability to be assigned and handle cases directly. Implement a toggle or switch feature in the portal that allows an Admin (whether using the master login or a designated personal login) to seamlessly alternate between **"Admin Mode"** (full system oversight, analytics, and governance) and **"Case Handler Mode"** (managing only their assigned cases).
- **Self-Assignment (Unassigned Cases):** While in Admin Mode, when navigating the "Unassigned Cases" tab, the Admin must have the option to assign cases directly to themselves (routing the case to their own Case Handler Mode view).

- **OIC / Temporary Admin Delegation:** Add a setting or feature allowing the primary Admin to designate a specific Case Handler as the **"Officer in Charge" (OIC)** or **"Temporary Admin"** during periods when the Admin is away or unavailable.
- **Temporary Admin Access:** When a Case Handler is granted Temporary Admin status, their interface must dynamically update to include the mode toggle. This will allow the designated handler to switch between their standard **"Case Handler Mode"** (to continue managing their own workload) and **"Admin Mode"** (to assume full administrative duties and oversight).
