System Update Specifications: TTBDO Website Design, Disclosure, Application Flow & Prefilled PDF Forms

Typography and Institutional Color Palette

- **Font Family: Optima** will be used across the entire system and landing page to match the official branding guidelines.
-
- **Institutional Color Specifications:** The UI design strictly incorporates the official University of the Philippines visual identity colors:
-
    - **Maroon (UP Maroon):** Primary color for the university brand and main sections (Coated: Pantone 1955C / C-29.12%, M-100%, Y-70.3%, K-26.69%; Uncoated: Pantone 1955U / C-34.12%, M-75.46%, Y-49.49%, K-13.6%).
    -
    - **Forest Green:** Complimentary color (Coated: Pantone 7484C / C-91.12%, M-39.92%, Y-79.14%, K-37.38%; Uncoated: Pantone 7484U / C-74.47%, M-39.78%, Y-61.68%, K-20.83%).
    -
    - **Yellow (to approximate gold):** Accent color for details and seal sections (Coated: Pantone 1235C / C-0%, M-32.06%, Y-94.9%, K-0%; Uncoated: Pantone 116U / C-0%, M-34.17%, Y-95.99%, K-0%).
    -
    - **Spot Black:** Utilized for the logotype and foundational elements.
    -

Landing Page Redesign & User Portal Layout

- **Layout Inspiration:** The landing page replicates the structure of the DPMIS website.
-
- **Core Navigation Menu:** The top navigation bar contains only four persistent pages: **Home**, **FAQs**, **About Us**, and **Contact Us**.
-
- **Persistent Navigation on Authentication:** When users click **Login** or **Create Account** via the user portal, the landing page tabs (Home, About Us, etc.) remain visible at the top maintaining structural consistency with the same overall layout.
-
- **Portal Redirect Views:** The redirect pages for login and account creation contain exclusively the dedicated form fill-up boxes, omitting landing page informational blocks while preserving the exact layout style.
-

Disclosure Tab & PDF Guidance

- When applicants navigate to the new **Disclosure** tab and select the relevant IP application type, the corresponding official PDF form automatically displays.

-
- If they attempt to download this blank form directly, a message appears stating: *"You do not need to manually fill this out because the system can autopopulate it according to what you are going to submit."*
-

Automated PDF Generation, Preview, and Download

Applicants filling out forms via the **Application** tab have their data automatically populated into official PDF forms upon submission, granting instant access to **preview** and **download** buttons for the prefilled documents.

- **Sample Preview Feature:** The system displays a working sample or preview using the reference PDF provided by the office (such as the inventory sharing form), ensuring inventors and their respective shares are automatically populated based on their submitted answers.
-

Pre-Submission Confirmation Message

Before clicking submit, applicants encounter a confirmation prompt stating:

> *"By submitting, you confirm that all information provided is correct. This data will be used to automatically populate your application forms. Please note that entering incorrect information will result in incorrect details on your generated forms."*

Post-Submission Edits & Case Handler Lock

If an applicant discovers an error after submission, they can update their information through the **My Applications** tab using the edit button associated with each specific project or application, subject to the following rules:

- **Case Handler Lock:** Once the case has been assigned to a handler, the edit option is permanently locked, and applicants can no longer make changes.
-
- **One-Time Edit Limit:** Before a handler is assigned, each application can only be edited **ONCE**. Once saved, the edit button is permanently disabled for that application.
-
- **Re-download Prompt:** Upon submitting an edit, a notification appears displaying the prompt: **"REDOWNLOAD PREFILLED FORMS?"** so applicants can grab the updated PDF documents via the updated preview and download options.
-

Wet Signature Requirement

Both within the initial application view and during the post-submission edit process, a prompt reminds users:

"Generated forms must be printed and submitted to the TTBDO office with an original wet signature."
