System Update Specifications: TTBDO Website & Application Workflow

- **Unified UI Styling with UP Visual Identity**: The entire system, including all interface elements and the landing page, strictly adheres to the official University of the Philippines visual identity guidelines using the **Optima** typeface and institutional colors (**UP Maroon**, **Forest Green**, **Yellow/Gold**, and **Spot Black**).
-
- **Calendar Deadlines Bug Fix**: The calendar widget is updated so that clicking on any specific day marked with red dots dynamically opens a detailed modal, sidebar, or expanded view listing all corresponding deadlines and scheduled events for that date.
-
- **Disclosure Tab & Supporting Documents Update**: Within the new Disclosure tab, applicants are no longer required to upload manually filled forms. When an IP application type is selected, the system displays the relevant form template accompanied by clear UI text noting that manual filling is unnecessary, as the system automatically generates and populates it upon final submission for printing, wet signing, and physical submission to the office.
-
- **Disclosure Tab PDF Download & Auto-Population Guidance**: Applicants remain permitted to download application forms from the Disclosure tab if desired; however, clicking the download button immediately triggers a prompt stating: *"You do not need to manually fill this out because the system can autopopulate it according to what you are going to submit."*
-
- **Auto-Populated Form Generation on Submission**: Upon clicking submit on an application, the system immediately processes user responses (including inventor details and respective shares for documents like the inventory sharing form) and renders them directly as both a preview and a downloadable prefilled PDF.
-
- **Comprehensive Edit Capabilities**: For the edit application feature, applicants are authorized to edit everything originally shown and submitted within the new Disclosure tab, subject to the established one-time edit limit and case handler lock rules.
-
- **Editable Request Responses & File Attachments for Applicants and Handlers**: Utilizing the specific **"Request Response"** button in the system, both applicants and handlers possess full capabilities to edit their responses and attach supporting files directly within the communication channel.
