Figma Prototyping & System Design Prompt: IPASA System Update

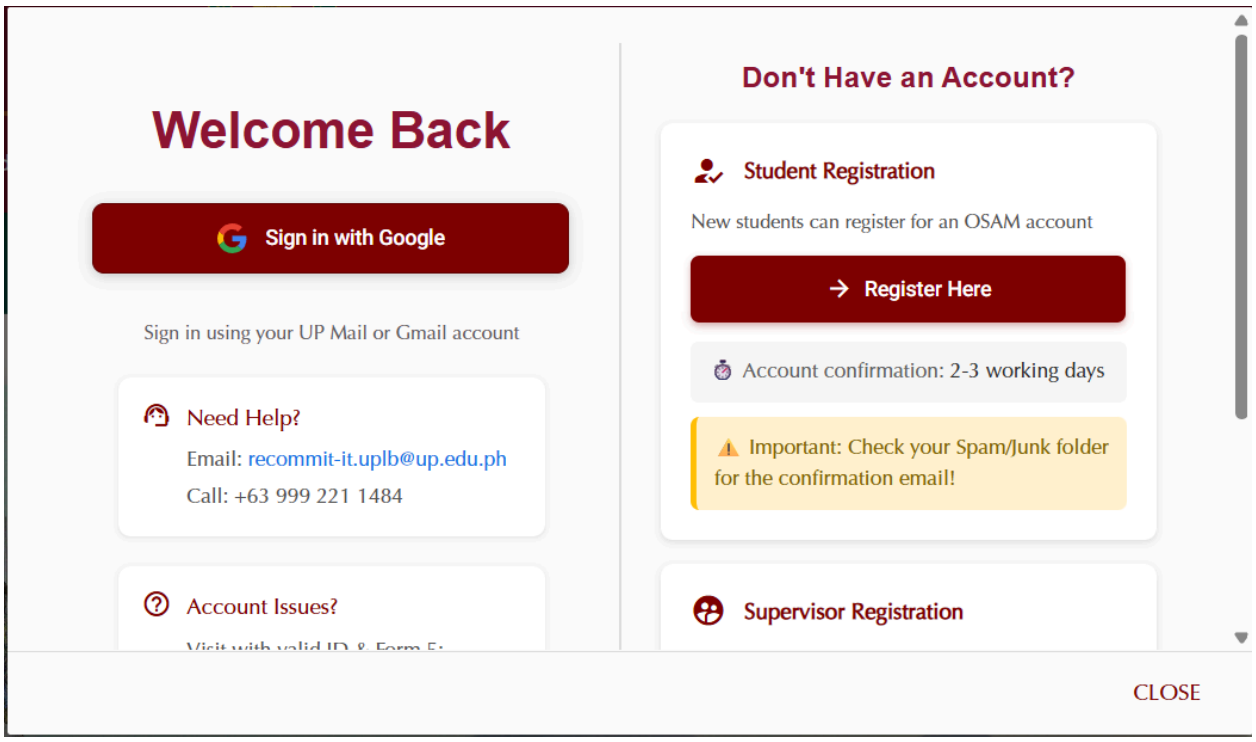

Global Design & Typography Guidelines:

- **Font Family:** Use the **Optima** typeface across the entire system and landing page.
- **Institutional Color Palette:** Strictly incorporate University of the Philippines institutional colors: **UP Maroon** (Primary brand and main sections), **Forest Green** (Complimentary color), **Yellow/Gold** (Accent details and seal sections), and **Spot Black** (Logotype and foundational elements).

1. Landing Page, Navigation, & User Portal Authentication

- **Top Navigation Menu:** Keep the top navigation bar clean, persistent, and limited to four items: **Home, FAQs, About Us, and Contact Us**.
- **TTBDO Logo & Branding:** Ensure the **TTBDO Logo** is clearly visible and prominent at the upper left part of the page.
- **About Us Section:** Enhance the "About Us" section by explicitly listing the **IP Types Handled by TTBDO** (Patent, Utility Model, Trademark, Copyright, Industrial Design) accompanied by a brief description for each type.
- **User Portal Account Creation & Login:**
    - Model the account type options dropdown after the OSAM login method pattern.
    - When creating an account, the options must be **Applicant Registration** and **Case Handler Registration**. Both applicants and case handlers must use their official `@up.edu.ph` account to register.

- **Unified Sign-In:** Remove the role selection choices (*Applicant, Case Handler, Admin*) from the login screen entirely. The linked UP account must automatically recognize the correct user role.
- **Prototype Test Credentials:** For prototype demonstration purposes, display these exact placeholder emails on the login view:

    - Applicant: `applicant@up.edu.ph`
    - Case Handler: `casehandler@up.edu.ph`
    - Admin: `admin@up.edu.ph`

2. Hamburger / Side Panel Interaction Bug Fix

- **Instant Action Execution:** For all user roles, when the hamburger or side panel menu is active, clicking *any* button on the screen must **automatically close the hamburger/side panel** and **directly enable the clicked button in a single click** (resolving the previous issue where the first click only closed the menu).

3. New Disclosure Form & Form Generation Updates

- **Funding Source Dropdown:** In the new disclosure form, include **"Others"** as a dropdown choice so users can type in their custom funding source if it is not listed.
- **Removal of Manual Download & Guidelines:** Remove the manual form download buttons and guidelines entirely from the new disclosure section since manual filling is no longer required.
- **Instructional Top Banner & Preview:**
    - Place a clear instruction at the top of the form: *"Fill out and system will auto generate needed forms."*
    - Instead of a download button for blank forms, show an **example preview** of what the autopopulated forms will look like.
- **Shared View Folder:** All items submitted through responses must automatically upload into the view folder, making them visible across all user roles.
- **Removal of Royalty Sharing:** Remove the section and text reading: *"Royalty Sharing. Refer to attached royalty sharing form."*

4. Communication, Threading, and Notifications

- **Multi-Reply Response Requests:** When replying to a response request, both applicants and case handlers must be able to add **multiple replies under the same thread** instead of being limited to a single reply.
- **Google Docs Comment Resolution for Remarks:** When replying to remarks or comments, Case Handlers and Admins must have their replies show up under the exact same thread following a **Google Docs comment resolution** workflow.
- **Unresolved-Only Notification Badges:** The remarks and response request notification numbers must **only show counts of unreplied or unresolved items**. If a remark or response request is already resolved, it must be excluded from the notification badge number for handlers, admins, and applicants.

5. Page Minimalization & Card Details

- **Collapsed by Default:** For all users, **submission details, inventor details, and case details** must be hidden by default on all card case views and will only appear upon clicking an expansion button, minimizing on-page clutter to prevent an overwhelming interface.

6. Admin Analytics & Case Assignment Enhancements

- **Visual Analytics Presentation:** Revamp the admin analytics section to provide a much more visual data presentation.
- **Stacked Bar Chart:** Update the Admin *"Applications / Month"* bar chart (with a year filter) to utilize a **stacked bar chart** format.
- **Handler Assignment Reference & Workload Tracking:** When assigning a case handler, allow the Admin to set a deadline and add internal notes, while supporting search and IP type filters. Furthermore, display **current assignments and the number of cases currently handled by each handler** as a reference so Admins can avoid overloading any handler.
