Additional edits/updates

1. Analytics page
    a. Update the graphs color into solid colors instead of gradient glass effect
2. Unassigned cases page
    a. The admin must be able to set a deadline upon clicking the assign case handler
3. Pre-protection page
    a. Change the term ‘assigned to” handler name to “case handler” handler name
        i. 

    b. The extend deadline feature mus show the design before the current version with option to add +3, +7, +14 days, specific days for example. If the the handler is late, there must be like a warning here. Theres only extend deadline here, no set deadline because set deadline is done when assigning the case handler in unassigned cases page.
    c. For the remarks, the admin and case handler must be able to see remarks or comments from both sides. If something is unread yet, must show that. They must be both able to mark a remark as resolved too. This applies to prosecution and completed cases page too.
    d. For the link folder, once a link has been added, the handler and admin must be able to attach files from the computer where it will be automatically added to the drive link. Attached files must have automated different folders “attached files.”
    e. The ip types must be turned into a filter by IP type, with all then specific ip types. When a specific ip type filter is chosen, the page must show that status like whats in the current design, but only the chosen filter will be shown.
    f. There must be a feature where the case can be shared or transferred to a different handler in case the original one is busy or unavialble
        i. 

4. Prosecution page
    a. Same updates as the pre-protection items c, d, e, f
    b. Double check if the detailed ipophl steps matches the progress
5. Complete cases page
    a. Update tab name to Completed Cases
    b. Same update as pre-protection c, d, e
6. All cases page
    a. Try to show an example where there is a folder link
    b. The case handler and admin remarks/comments must be under one button. Upon clicking this button, the admin can see previous remarks from both handler and admin
7. For the settings to update photo and password

    a. Show what happens when the settings is clicked. When it is clicked, it will lead to a different tab showing admin info like Name, profile photo. They must be able to update name, profile photo, and password. When it is logged out, it goes back to the log in page.
8. Case handler page
    a. When a new case handler account is created, the admin must activate it first before they can log in
9. Log in page
    a. Make a log in page where there is choice to log in as applicant, case handler,and admin. The user must be able to create account. For case handlers create account, the admin must activate their account first. Upon activation, the case handler will receive an email
