9. Internal Backlog (Self-Identified, Not Panel Feedback)

Screen/ Feature	Role(s) Affected	Screenshot	How This Was Identified	Status	Notes
Unlimited Request in Pre-Protection	Case Handler	Fig. 9.1	Internal design review	Not Made Yet	The handler should be able to send an unlimited number of requests (e.g., additional documents/clarifications) to the applicant during the pre-protection stage. This flow was not designed. *(Note: this overlaps with panel feedback in Section 13.3 — "unlimited request for response, remarks.")*

Industrial Design Statistics Card	Admin	Fig 9.2	Internal design review	Not Made Yet	The Admin statistics cards currently do not include a card for Industrial Design. This needs to be added so Admin can track ID filings alongside other IP types.
File Deletion Confirmation + Notification	All Roles (Applicant , Case Handler, Admin)	Fig 9.3	Internal design review	Not Made Yet	No confirmation step was designed for when a user deletes an uploaded file. If an applicant deletes a file, the assigned Handler and Admin should be notified, since it affects case processing. The confirmation modal and notification behavior were not designed.

Standardized Case Number Across Stages	All Roles (Applicant, Case Handler, Admin)	Fig 9.4	Internal design review	Needs Improvement	The case number format/display is not consistent across all stages of the process (e.g., pre-protection vs. prosecution). This was flagged but not standardized before the internship concluded. *(Note: this overlaps with panel feedback in Section 13.3 — Pre-Protection should not show an application number, while Prosecution should show the number assigned by IPOPHL.)*

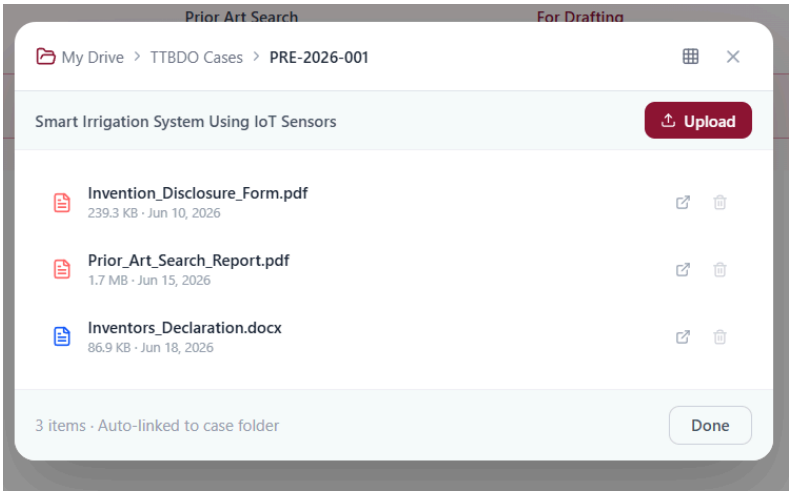

Fig 9.3 *All Roles- File Deletion Confirmation + Notification*

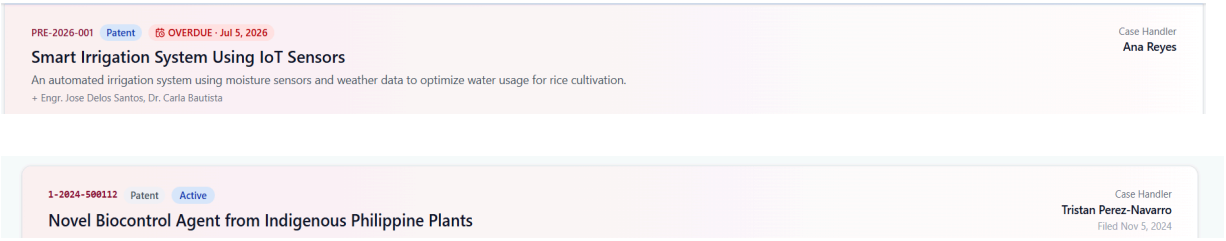

Fig 9.4 *All Roles-Standardized Case Number Across Stages*

10. Design-to-Dev Handoff Notes

- The login page's role-selection pattern (Fig. 5.1) should be directly modeled on the **DOST DPMIS portal** (Fig. 13.1, 13.2 — reference screenshots from dpmis.dost.gov.ph), which uses a single "User Portal" dropdown with "Log In" / "Create Account" options rather than separate role buttons. Per Section 13.3, the next iteration of the login page should follow this DPMIS pattern more closely (single sign-in entry point, dropdown-based navigation) rather than the current three-button layout.

11. Content & Copy Notes

- The system was designed under the working name "SULONG"; the final approved name is "IPASA" (see Section 13.2).

12. Known Design Issues / Open Questions

Issue	Screen/Role	Screenshot	Notes
Case number shown in Pre-Protection	Admin, Case Handler, Applicant	Fig. 6.4	Panel feedback indicates Pre-Protection should **not** display an application number at all, since one hasn't been assigned by IPOPHL yet — see 13.3
Case handler transfer notification	Admin	Fig. 6.4	Current design shows a passive "Transferred" label on the card; panel requested an active update/notification behavior — see 13.3
Calendar deadline markers	Admin	Fig. 6.1	Dots/markers for deadlines need to be added to the homepage calendar — see 13.3
Detailed progress bar order	Case Handler	Fig. 6.11	Sub-steps in the detailed progress bar are not currently in chronological order — see 13.3

13. Final Presentation Feedback (Not Incorporated)

13.1 Context

This feedback was received during the final project presentation, which served as the single, one-time defense of this design for the internship. As the internship has ended, this feedback has not been incorporated into the Figma file. It is documented here as-is for whoever continues this project.

13.2 New Feature Requests

Feature Requested	Description/Context	Suggested Role(s) Affected	Source
System rename to IPASA	The final approved name for the system is "IPASA." All screens currently still display "SULONG" branding and would need to be updated.	All	Final Presentation – July 13, 2026
Abandoned applications tracking	Admin view needs a way to include/track abandoned applications, which does not currently exist in any tab.	Admin	Final Presentation – July 13, 2026

Autopopulation across disclosure documents	Applicants should only need to enter shared information (e.g., name, inventor details) once; the system should autopopulate that same information across related documents/forms instead of asking the applicant to re-enter it each time.	Applicant	Final Presentation – July 13, 2026

13.3 Requested Improvements

Existing Feature/Screen	Screenshot (current state)	Requested Change	Reason/Feedback Given	Source
Login Portal / Landing Page	Fig. 5.1	Remove the three separate role-selection buttons (Admin, Applicant, Case Handler) in favor of going directly to a single sign-in screen	Panel felt the role-button step was an unnecessary extra click before signing in	Final Presentation – July 13, 2026
Login Portal — Branding	Fig. 5.1	Reduce the size/prominence of the "SULONG" brand name on the sign-in page	Panel felt the branding text was too large/repetitive on the sign-in screen	Final Presentation – July 13, 2026

Login Portal — Public Forms & Guidelines	Fig. 5.1	Convert the forms list into a dropdown/collapsed format instead of the current fully expanded layout	Panel felt this section made the sign-in page feel cluttered	Final Presentation – July 13, 2026
Admin — Home Calendar	Fig. 6.1	Add dot markers on the calendar to indicate which dates have deadlines	Improves at-a-glance scanning of the calendar	Final Presentation – July 13, 2026
Admin — Case Handler Transfer	Fig. 6.4	Update/improve the notification shown when a case handler transfer occurs	Current passive label doesn't sufficiently notify relevant parties	Final Presentation – July 13, 2026
Admin — Pre-Protection Case Number	Fig. 6.4	Remove the application number display from Pre-Protection cases entirely	An application number should not exist yet at the Pre-Protection stage, since it hasn't been filed with IPOPHL	Final Presentation – July 13, 2026

Admin — Prosecution Case Number & Deadline	Fig. 6.5	Ensure the application number shown in Prosecution is the one assigned by IPOPHL (not an internal number); include a deadline field that only Admin can set	Distinguishes internal tracking from the official IPOPHL-issued number, and clarifies deadline-setting responsibility	Final Presentation – July 13, 2026
Case Handler — Request for Response / Remarks	Fig. 9.1	Allow unlimited requests for response and unlimited remarks, rather than a capped number	Current design may limit how many times a handler can follow up with an applicant	Final Presentation – July 13, 2026
Case Handler — Completed Cases	—	Completed cases should be able to be reopened by the handler	Currently, once a case is marked complete, there's no way to reopen/edit it	Final Presentation – July 13, 2026
Case Handler — Detailed Progress Bar	Fig. 6.11	Reorder the detailed progress bar steps so they display in strict chronological order	Current step order is not chronological, which may confuse	Final Presentation – July 13, 2026

			users tracking case progress	
Applicant — Home Page FAQ Buttons	Fig. 6.11	Remove the redundant FAQ button(s) on the New Disclosure page, since FAQ access already exists elsewhere	Having multiple FAQ entry points on the same page/flow is redundant	Final Presentation – July 13, 2026

13.4 Requested Removals

Feature/Screen to Remove	Screenshot	Reason for Removal	Source
Role-selection buttons on sign-in (Admin/Applicant/Case Handler)	Fig. 5.1	To be replaced with a direct single sign-in flow (see 13.3 above — logged here as well since it is effectively a removal)	Final Presentation – July 13, 2026
One of the duplicate FAQ buttons on New Disclosure page	Fig. 6.16	Redundant with existing FAQ/Resources access point	Final Presentation – July 13, 2026

13.5 Reference Material Provided During Feedback

The panel referenced the **DOST DPMIS portal** (dpmis.dost.gov.ph) as a model for how the sign-in experience should be restructured — specifically its single "User Portal" dropdown (containing "Log In" and "Create Account") in place of separate role buttons, and its simpler, single-column login form. See Fig. 13.1 and Fig. 13.2 (reference screenshots) and Section 10 (Design-to-Dev Handoff Notes).

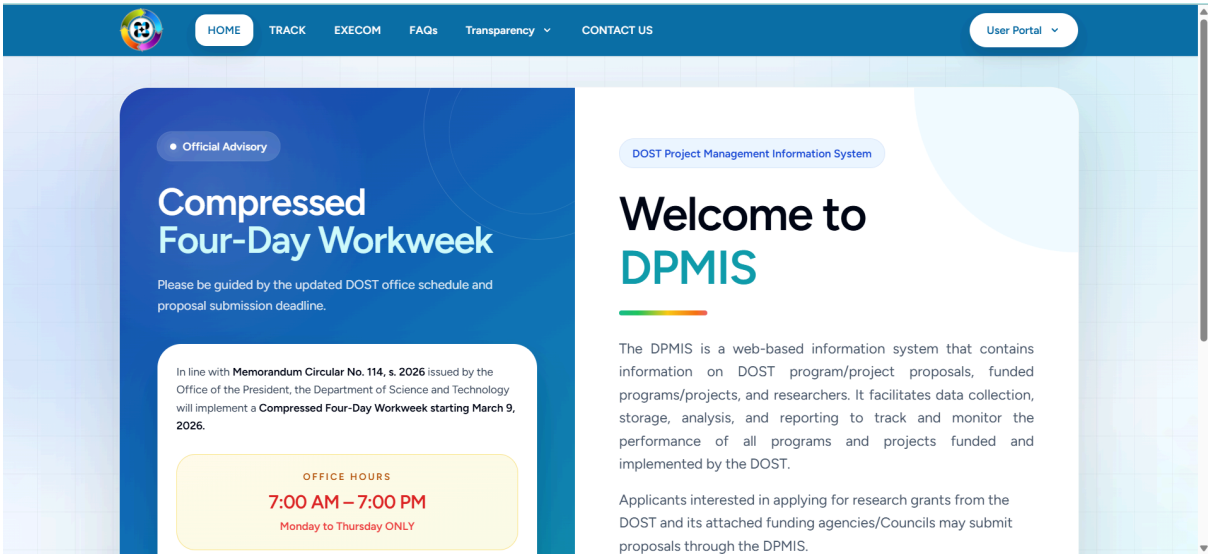

Fig 13.1 *DMPIS - Home*

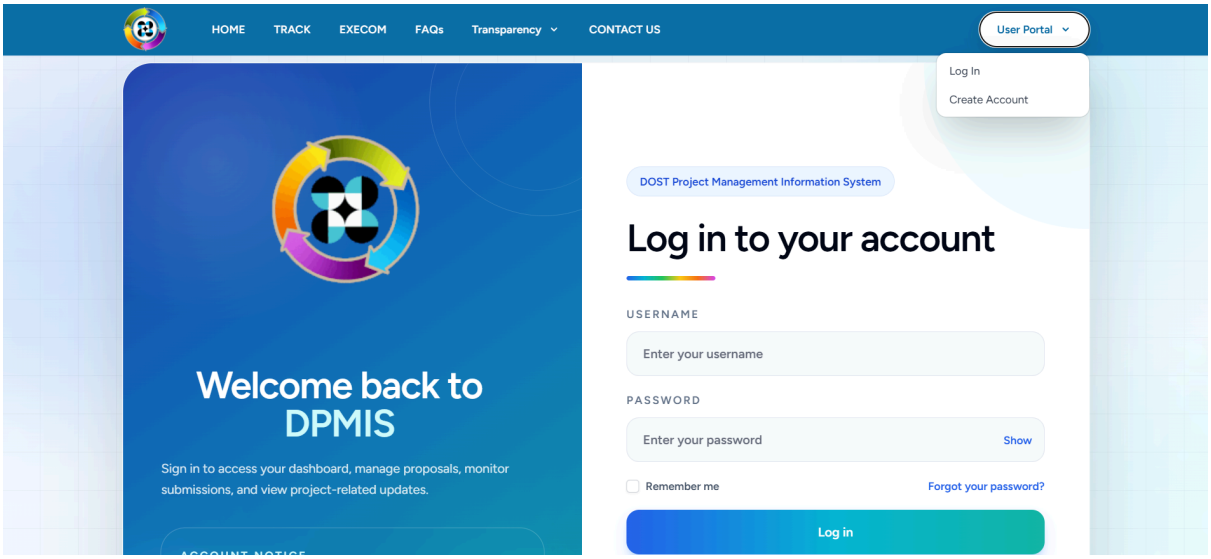

Fig 13.2 *DMPIS - User Portal*

13.6 Status Note

All items in this section remain unimplemented as of July 17, 2026. This was the only feedback session held for this design, and no revisions were made afterward, as the internship concluded following this presentation.

14. Appendix

- Glossary of terms/acronyms
    - **IPASA:** Intellectual Property Application System Administration
    - **SULONG:** System for Unified Licensing, Ownership, and Novelty Governance
    - **TTBDO:** Technology Transfer and Business Development Office
    - **IP:** Intellectual Property
    - **UM:** Utility Model
    - **IPOPHL:** Intellectual Property Office of the Philippines
